MODELS COVERED BY THIS DEALER'S MANUAL

This Dealer's Manual is for the following models.

Part/Series		Inter-8	Inter-7
	Coaster brake + Disc brake	SG-C6001-8CD	-
Internal geared hub	Disc brake	SG-C6001-8D	SG-C3001-7D
	Coaster brake	SG-C6001-8C	SG-C3001-7C SG-C3001-7C-DX
	Inter-M brake	SG-C6001-8R SG-C6011-8R	SG-C3001-7R
	V-BRAKE	SG-C6001-8V SG-C6011-8V	SG-C3000-7V
Shift lever		SB-C6000-8	SB-C3000-7
Shift lever	REVOSHIFT lever	SL-C6000	SL-C3000

IMPORTANT NOTICE

- This dealer's manual is intended primarily for use by professional bicycle mechanics.
- Users who are not professionally trained for bicycle assembly should not attempt to install the components themselves using the dealer's manuals. If any part of the information on the manual is unclear to you, do not proceed with the installation. Instead, contact your place of purchase or a local bicycle dealer for their assistance.
- Make sure to read all instruction manuals included with the product.
- Do not disassemble or modify the product other than as stated in the information contained in this dealer's manual.
- All manuals and technical documents are accessible online at https://si.shimano.com.
- For consumers who do not have easy access to the internet, please contact a SHIMANO distributor or any of the SHIMANO offices to obtain a hardcopy of the User's Manual.
- Please observe the appropriate rules and regulations of the country, state or region in which you conduct your business as a dealer.

For safety, be sure to read this dealer's manual thoroughly before use, and follow it for correct use.

The following instructions must be observed at all times in order to prevent personal injury and physical damage to equipment and surroundings. The instructions are classified according to the degree of danger or damage which may occur if the product is used incorrectly.

DANGER

Failure to follow the instructions will result in death or serious injury.

WARNING

Failure to follow the instructions could result in death or serious injury.

CAUTION

Failure to follow the instructions could cause personal injury or physical damage to equipment and surroundings.

TO ENSURE SAFETY

MARNING

- Be sure to follow the instructions provided in the manuals when installing the product.

 Only use SHIMANO genuine parts. If a component or replacement part is incorrectly assembled or adjusted, it can lead to component failure and cause the rider to lose control and crash.
- Wear approved eye protection while performing maintenance tasks such as replacing components.

Be sure to also inform users of the following:

• Because each bicycle may handle slightly differently depending on the model, be sure to learn the proper braking technique (including brake lever pressure and bicycle control characteristics) and operation of your bicycle. Improper use of your bicycle's brake system may result in a loss of control, which could lead to serious injury due to a fall or collision.

TO ENSURE SAFETY

• Use brake levers with mode switching mechanism in the combinations shown in the figures. The brake levers are equipped with a mode switching mechanism which can be used to make them compatible with cantilever brakes, roller brakes or V-BRAKE brakes with power modulator. (SB-C6000-8 / SB-C3000-7 is compatible with roller brakes or V-BRAKE brakes with power modulator. Note that SB-C6000-8 / SB-C3000-7 is not compatible with cantilever brakes.) If the incorrect mode is selected, it may result in either excessive or insufficient braking force, which is highly dangerous. Select the correct mode as shown in the figures.

Mode positio	Applicable brake caliper	
C: Mode position for compatibility with cantilever brakes R: Mode position for compatibility with roller brakes	C-R position	Cantilever brakesRoller brakes
For SB-C6000-8 / SB-C3000-7 R: Mode position for compatibility with roller brakes	R position	• Roller brakes
V : Mode position for compatibility with V-BRAKE brakes with power modulator	V position V C-R	V-BRAKE brakes with power modulator

• Check that the wheels are fastened securely before riding the bicycle. You may fall or collide and be seriously injured.

For Installation to the Bicycle, and Maintenance:

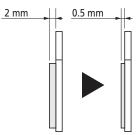

- When securing the brake arm to the frame, be sure to use an arm clip that matches the size of the chainstay, and securely tighten them with the clip bolt and clip nut to the specified tightening torque.
- Use a lock nut with a nylon insert (self-locking nut) as the clip nut. It is recommended that Shimano made clip bolts, clip nuts, and arm clips be used. If the clip nut comes off the brake arm, or if the clip bolt or arm clip becomes damaged, the brake arm may rotate on the chainstay and cause the handlebars to jerk suddenly, or the bicycle wheel may lock and result in serious injury due to a fall or collision.
- When installing the hub to the frame, be sure to install the correct non-turn washers to the left and right sides, and securely tighten the hub nuts to the specified torques. If the non-turn washers are installed on one side only, or if the hub nuts are not tightened sufficiently, the non-turn washer may fall out, which could cause the hub axle to rotate and the cassette joint to turn, resulting in the handlebars being accidentally pulled by the gear shifting cable and an extremely serious accident.

■ Disc brake rotor

• Please use extra caution to keep your fingers away from the rotating disc brake rotor. The disc brake rotor is sharp enough to inflict severe injury to your fingers if caught within the openings of moving rotor.

- Do not touch the calipers or disc brake rotor while riding or immediately after dismounting from the bicycle. The calipers and disc brake rotor will become hot when the brakes are operated, so you may get burned if you touch them.
- Do not allow any oil or grease to get onto the disc brake rotor and brake pads. Riding the bicycle with oil or grease on the disc brake rotor and brake pads may prevent the brakes from operating and result in serious injury due to a fall or collision.
- Check the thickness of the brake pads and do not use them if they have a thickness of 0.5 mm or less. Doing so may prevent the brakes from operating and result in serious injury due to a fall or collision.

- Do not use the disc brake rotor if it is cracked or deformed. The disc brake rotor may break, and result in serious injury due to a fall.
- Do not use the disc brake rotor if its thickness is 1.5 mm or less. Also do not use it if the aluminum surface becomes visible. The disc brake rotor may break, and result in serious injury due to a fall.

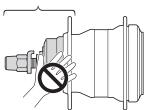

■ Coaster brake hub

• When using a reversed dropout, use a chain adjuster to remove excess slack from the chain.

A CAUTION

Be sure to also inform users of the following:

- Be sure to shift the shift lever one gear at a time. During shifting, reduce the force being applied to the pedals. If you try to force operation of the shift lever or suddenly perform multi-shifting while the pedals are being turned strongly, your feet may come off the pedals and the bicycle may fall over, which could result in serious injury. Operating the shift lever to multi-shift to a light gear may also cause the outer casing to spring out of the shift lever. This does not affect the capabilities of the shift lever because the outer casing returns to the original position after shifting.
- When the brake is used frequently, do not touch the area around the brake for at least 30 minutes after riding the bicycle. The area around the brake may become hot.

■ Coaster brake specifications

- Do not continuously apply the brakes when riding down long slopes. This will cause the internal brake parts to become very hot, weakening braking performance, as well as causing a reduction in the amount of brake grease inside the brake, which can lead to problems such as abnormally sudden braking.
- Perform the bed-in procedure and check that the braking force of the coaster brake is correct.

NOTICE

Be sure to also inform users of the following:

- The gears can be shifted while lightly pedaling, but on rare occasions the pawls and ratchet inside the hub may produce some noise afterwards as part of normal gear shifting operation. In addition, a loud sound may be temporarily emitted if the gears are shifted while strongly pedaling with E-BIKE, etc., but this is normal.
- The internal geared hub is not completely waterproof. Avoid using the hub in places where water might get inside and do not use high-pressure water to clean the hub, otherwise the internal mechanism may rust.
- Do not disassemble the hub. If you need to disassemble it, contact the place of purchase.
- All of the following occurrences are due to the internal gear-shifting structure and are not the failure of the internal components.

	Type of hub		Gear positions where
Phenomenon	For coaster brakes	For roller brakes / V-BRAKE	phenomenon might occur
Noise occurs when the pedals rotate.	×	7-speed hub	All gear positions except 1st
Noise occurs when the bicycle is pushed backward.	×	8-speed hub	5th, 6th, 7th, 8th
The hub has a built-in mechanism that supports gear shifting and when the mechanism operates during gear shifting, noise and vibrations occur.	×	8-speed hub	All gear positions
Depending on gear position, gear-shifting may feel different.	×	8-speed hub, 7-speed hub	All gear positions
Noise occurs when pedal rotation is stopped during riding.	×	7-speed hub	All gear positions

- Products are not guaranteed against natural wear and deterioration from normal use and aging.
- For maximum performance we highly recommend Shimano lubricants and maintenance products.

■ Coaster brake specifications

• If the wheels are not rotating smoothly, you need to replace or grease the brake shoes. Consult the dealer where you made the purchase.

For Installation to the Bicycle, and Maintenance:

- The cassette joint should only be used with sprockets with 16 to 23T.
- The gear ratio of the front chainring to the rear is about 2.1-to-1.

Example) For 26 inch wheels

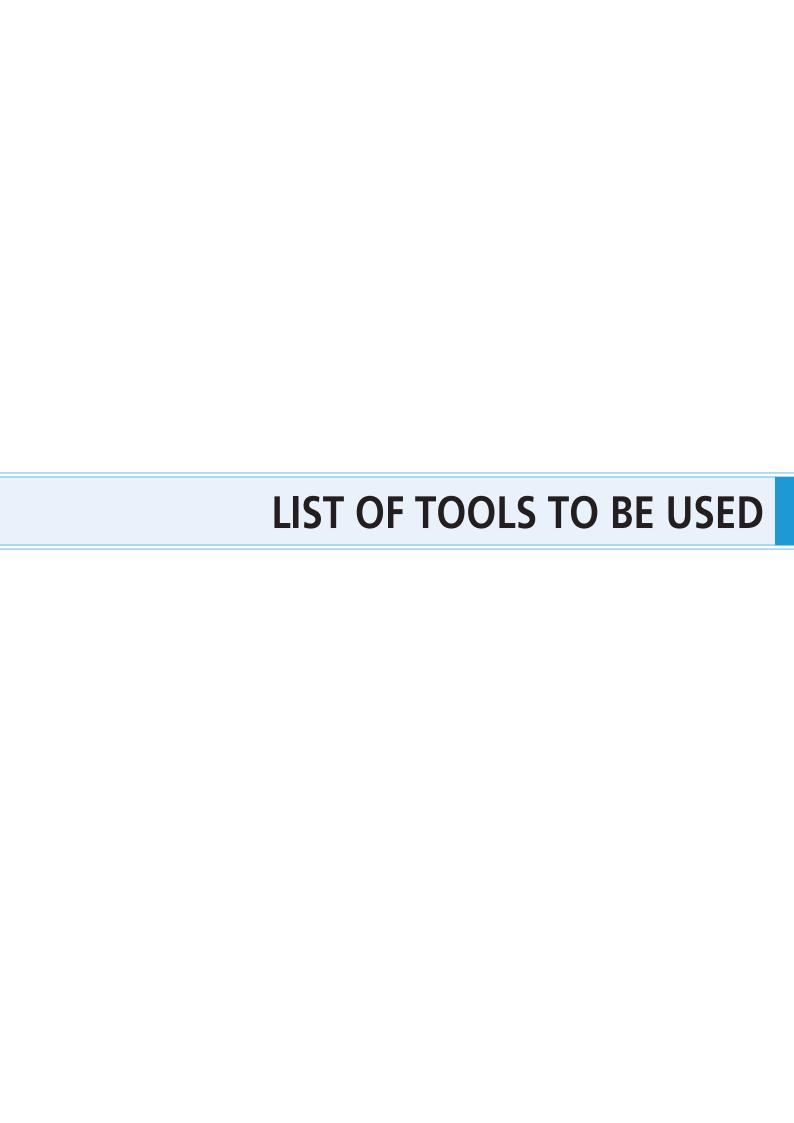

Front	36T	38T	46T
Rear	16T	18T	22T

- To maintain the product in good working order, it is recommended to have the place of purchase or a distributor carry out maintenance such as lubrication of the internal parts about once a year from the first time of use (once every 2,000 km if the bicycle is used very frequently). If the bicycle is used under harsh conditions, more frequent maintenance is required. Also, for carrying out maintenance, the use of SHIMANO internal geared hub grease or a lubrication kit is recommended. If SHIMANO grease or a SHIMANO lubrication kit is not used, problems such as a malfunction in gear shifting may occur.
- If the wheel becomes stiff and difficult to turn, perform an inspection.
- The chainrings and sprockets should be periodically washed with a neutral detergent. In addition, cleaning the chain with neutral detergent and lubricating it can be an effective way of extending the life of the chainrings, sprockets, and the chain.
- If the chain keeps coming off the gears during use, replace the chainrings, sprockets, and the chain.

■ Coaster brake specifications

- Use a wheel with 3x or 4x spoke lacing. Wheels with radial lacing cannot be used. Otherwise, the spokes or the wheel may get damaged, or noise may occur when braking.
- If the wheel becomes stiff and difficult to turn, you should replace the brake shoes or lubricate with grease.
- Use only the specified grease for the brake shoes and when using a lubrication kit, remove the brake shoes to avoid contact with the oil.

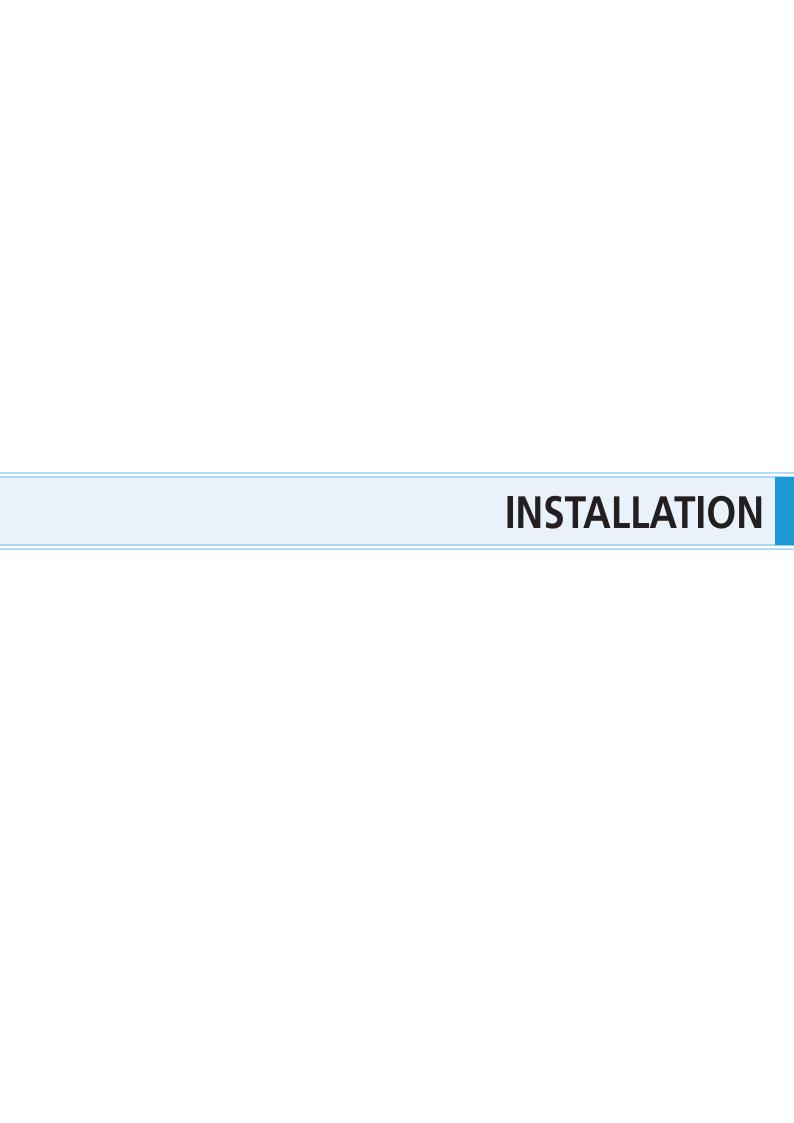

The actual product may differ from the illustration because this manual is intended mainly to explain the procedures for using the product.

LIST OF TOOLS TO BE USED

The following tools are needed for installation, adjustment, and maintenance purposes.

	Tool		Tool		Tool
2	2 mm hexagon wrench	10mm	10 mm spanner	#25	Hexalobular[#25]
3	3 mm hexagon wrench	#1	Cross head screwdriver[#1]		Adjustable wrench
5	5 mm hexagon wrench	TL-LR10	TL-LR10	TL-CJ40	TL-CJ40 (Y70898020)

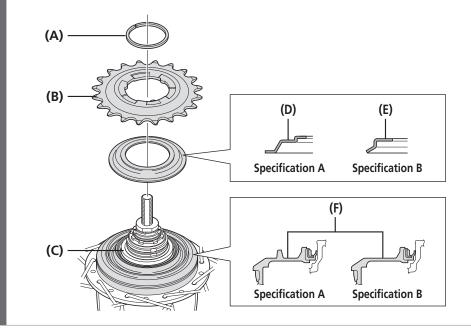

INSTALLATION

■ Installation of the sprocket to the hub

Place the right-hand dust cap B/right-hand dust cap C onto the driver on the right side of the hub body.

Next, install the sprocket and secure it in place with the snap ring.

Cuncifications	Applicable sprockets		
Specifications	Outward assembling	Inward assembling	
Α	16-23T	20-23T	
В	16-23T		

- (A) Snap ring
- **(B)** Sprocket
- (C) Driver
- (D) Right-hand dust cap C
- (E) Right-hand dust cap B
- (F) Right-hand dust cap A

NOTICE

Note the orientation of the right-hand dust cap.

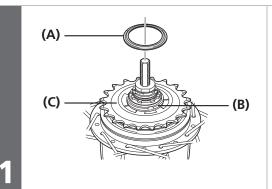

Specification A

If the sprocket is an inward assembling sprocket with 19T or fewer or for belt drive specifications, right-hand dust cap A will come into contact with the chain or pulley so specification B should be used instead.

Specification B

If the sprocket is an inward assembling sprocket with 16T and 3 mm teeth or for belt drive specifications, remove right-hand dust cap B before use.

■ Installation of the cassette joint to the hub

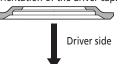

Install the driver cap to the driver on the right side of the hub body.

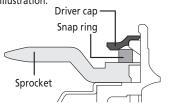

- (A) Driver cap
- (B) Driver
- (C) Sprocket

NOTICE

Note the orientation of the driver cap.

Install the driver cap in the position shown in the illustration.

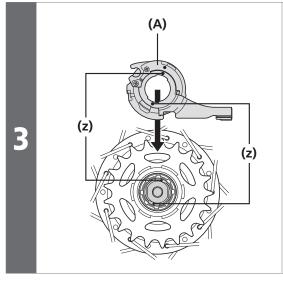

(z)
(A)
(B)

Turn the cassette joint pulley in the direction of the arrow to align the red ● marks on the pulley and the bracket.

(z) Should be aligned

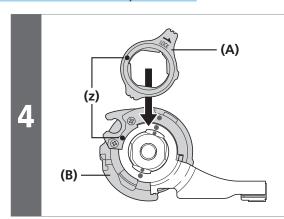

(A) Pulley

(B) Bracket

Install it with the red ● marks (z) on the cassette joint aligned with the red ● (SG-C6001 / SG-C6011) or yellow ▲ (SG-C3001) marks (z) on the right side of the hub body.

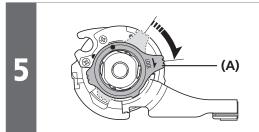

(A) Cassette joint

Secure the cassette joint to the hub with the cassette joint mounting ring.

When installing the cassette joint mounting ring, align the yellow ● mark (z) with the yellow ● mark (z) on the pulley of the cassette joint.

- (A) Cassette joint mounting ring
- (B) Pulley

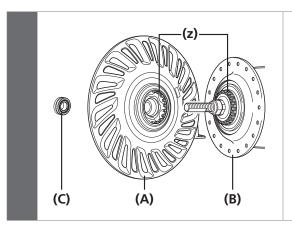

Turn the cassette joint mounting ring 45° clockwise.

(A) Cassette joint mounting ring

NOTICE

Hold down the cassette joint bracket securely when performing work.

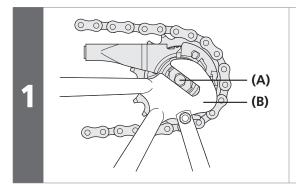

■ Installing the Inter-M brake to the hub body

Engage the hub body splines (z) with the INTER M brake splines (z), and then tighten with the brake unit fixing washer.

- (A) Inter-M brake
- **(B)** Hub body
- **(C)** Brake unit fixing washer

■ Installation of the hub to the frame

Mount the chain on the sprocket, and then set the hub axle into the dropout.

- (A) Hub axle
- (B) Dropout

Place non-turn washers and onto the right and left sides of the hub axle.

At this time, turn the cassette joint so that the protrusions of the non-turn washers fit into the grooves in the dropouts and align the joint to be almost parallel to the chainstay.

(A)

(B)

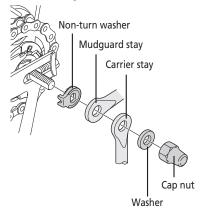

(C)

(D)

- (A) Non-turn washer (for left-side use)
- **(B)** Groove in dropout
- **(C)** Cassette joint
- (D) Chainstay
- **(E)** Non-turn washer (for right-side use)

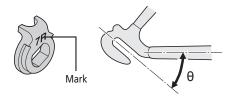

NOTICE

When installing parts such as a mudguard stay to the hub axle, install them in the order shown in the figure.

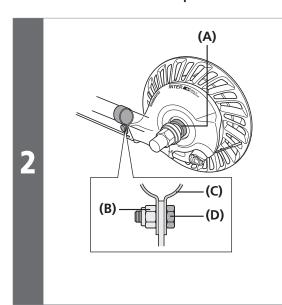

- The protrusion should be on the dropout side.
- Install the non-turn washer so that the protrusion fits securely in the dropout groove at the front and back sides of the hub axle.
- Use a non-turn washer that matches the shape of the dropout. Different non-turn washers are used for the left and right sides.

	Non-turn washer			
Dropout	Mark .	Cina		
	For right	For left	Size	
	5R / Yellow	5L / Brown	θ ≤20°	
Standard	7R / Black	7 / Gray	20°< ⊖ <38°	
	9R / Light brown	9L / Light green	20 ≤ ⊖ ≤36	
Reversed	6R / Silver	6L / White	⊖ =0°	
Reversed (Full chain case)	5R / Yellow	5L / Brown	Θ =0°	
Vertical	8R / Blue	8L / Green	⊖ =60° - 90°	

Note: Vertical type does not include the coaster specifications

In the case of Inter-M brake specifications

Attach the brake arm of the Inter-M brake to the chainstay with the brake arm clip.

Next, temporarily fix the clip bolt and clip nut by lightly tightening them.

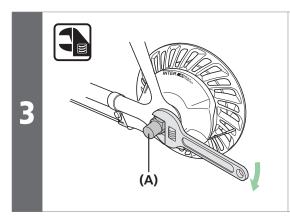

- (A) Brake fixing washer (insert manually)
- (B) Clip nut
- (C) Arm clip
- **(D)** Clip bolt (M6 \times 16 mm)

NOTICE

Check that the brake unit is firmly secured to the hub with the brake unit fixing washer.

If the hub nuts are cap nuts, use a frame with dropouts that are at least 7 mm thick.

Take up slack in the chain and secure the wheel to the frame with the cap nut.

(A) Hub nut

Tightening torque

30 - 45 N·m

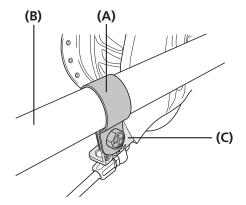

NOTICE

Check that the wheel is fixed securely to the frame with the hub nut.

Check that the brake arm is securely fastened to the chainstay with the brake arm clip.

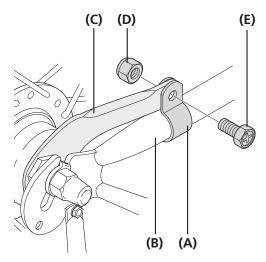

In the case of coaster brake specifications

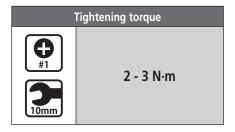

(A) Arm clip

(B) Chainstay

(C) Brake arm

(D) Clip nut

(E) Clip bolt (M6 \times 16 mm)

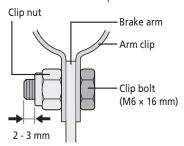

WARNING

When securing the brake arm to the frame, be sure to use an arm clip that matches the size of the chainstay, and securely tighten them with the clip bolt and clip nut to the specified tightening torque. Use a lock nut with a nylon insert (self-locking nut) as the clip nut. It is recommended that Shimano made clip bolts, clip nuts, and arm clips be used. If the clip nut comes off the brake arm, or if the clip bolt or arm clip becomes damaged, the brake arm may rotate on the chainstay and cause the handlebars to jerk suddenly, or the bicycle wheel may lock and result in serious injury due to a fall or collision.

NOTICE

- If it is not installed correctly, braking performance will suffer. Be careful not to apply excessive force when installing.
- If excessive force is applied to the brake arm to secure it, the wheel will make noise and become difficult to turn.
- After installing the arm clip, check that the clip bolt protrudes about 2 to 3 mm from the end face of the clip nut.

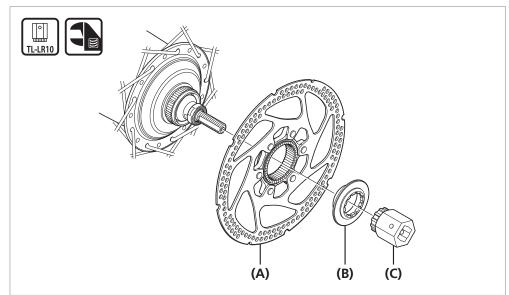

• Before using the Coaster Brake, check that the brake works properly and that the wheel turns smoothly.

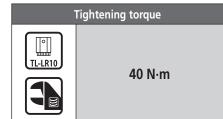

INSTALLATION

- Installation of the disc brake rotor
- Installation of the disc brake rotor

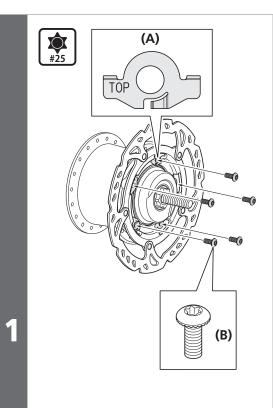

Center lock type

- (A) Disc brake rotor
- **(B)** Disc brake rotor fixing lock ring
- **(C)** TL-LR10

5 bolt type (with lock washer)

Attach the disc brake rotor and the disc brake rotor lock washers to the hub, and then tighten them on with the bolts.

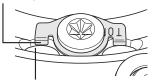

- (A) Lock washer
- **(B)** Disc brake rotor fixing bolt

Tightening torque 2 - 4 N·m

NOTICE

- Fit the lock washers so that the marking "TOP" is visible.
- Ensure that the hooked parts of the lock washer are securely caught on the notches in the disc brake rotor and then tighten on the lock washer with the disc brake rotor fixing bolt. If tightened while the hooked parts are against the surface of the disc brake rotor, the washer and its hooked parts will become deformed.

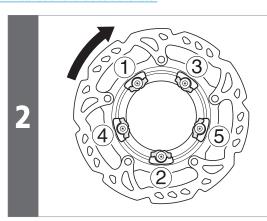

Hooked part of washer

Notch in disc brake rotor

- The lock washers are not reusable. Always use new lock washers when installing/ re-installing the disc brake rotor.
- Use the dedicated disc brake rotor fixing

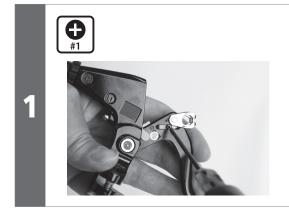

Wear gloves and turn the disc brake rotor clockwise with some force.

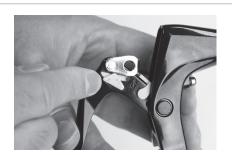

At this time, tighten on the disc brake rotor fixing bolts in the order indicated in the illustration.

■ Installation of the lever

When equipped with mode switching mechanism

Use cross head screwdriver[#1] to loosen the screw.

Set the mode switch to the mode position for the brake installed.

For V-BRAKE brakes

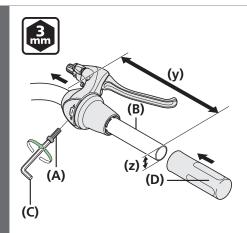

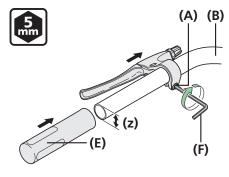

For caliper brakes/cantilever brakes/roller

Installation of the lever

Install the lever as shown in the illustration.

Pass the lever over the handlebar and then attach the grip/half grip.

Tighten the fixing bolt with a 3 mm hexagon wrench or a 5 mm hexagon wrench.

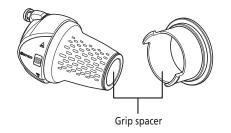

- **(y)** 166 mm or more
- (z) Ø22.2 mm

- (A) Fixing bolt
- (B) Handlebar
- (C) 3 mm hexagon wrench
- (D) Half grip
- (E) Grip
- **(F)** 5 mm hexagon wrench

Tightening torque	
3	2 - 2.5 N·m
5 mm	6 - 8 N·m

NOTICE

When using SL-C6000 / SL-C3000, make sure to install the handlebar with the grip spacer attached.

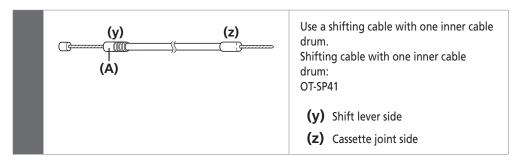

- If using Shimano half grip, the straight section of the handlebar should be 166 mm or longer.
 - Attach the REVOSHIFT lever to this straight section.
- Leave a gap of 0.5 mm between the REVOSHIFT lever and the half grip.

■ Installation of the shifting cable

For information on how to replace the inner cable, refer to the maintenance section.

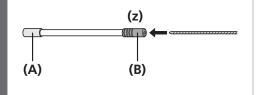

(A) Sealed outer cap

NOTICE

Make sure that the sealed outer cap is at the shift lever end.

■ Installing to the cassette joint

CJ-NX10 / CJ-8S20

Pass the inner cable through the OT-SP41 outer casing to the end with the plastic cap.

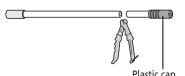

(z) Lever side

- (A) Aluminum cap
- (B) Plastic cap

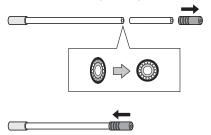

Cutting the outer casing

If cutting the outer casing, cut it near the end with the plastic cap while the cap is still attached.

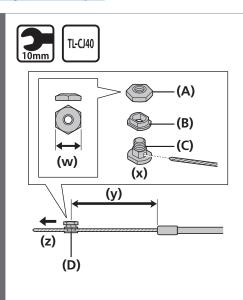

After cutting, make the cut end perfectly round and attach the plastic cap.

Set the REVOSHIFT lever to 1.

(A) REVOSHIFT lever

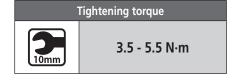

3

After checking that the end of the outer casing is securely set in the cable adjustment barrel of the REVOSHIFT lever, attach the inner cable mounting bolt unit to the inner cable.

- (w) 10 mm
- (x) Pass the inner cable through the hole.
- **(y)** 101 mm
- **(z)** Pull the inner cable when securing.

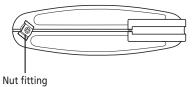

- (A) Inner cable mounting nut (Black)
- **(B)** Inner cable mounting washer (Silver)
- **(C)** Inner cable mounting bolt (Silver)
- **(D)** Inner cable mounting bolt unit

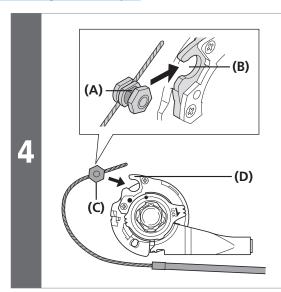

NOTICE

- This inner cable mounting bolt unit is designed only for CJ-NX10, CJ-NX40, CJ-8S20, and CJ-8S40. 11-speed mounting bolt units cannot be used.
- The tool is shipped ready to be used for CJ-NX10 and CJ-8S20.
- When installing the inner cable mounting bolt unit, use the setting tool TL-CJ40 (Y70898020).
- For CJ-NX10 and CJ-8S20, use the front side of TL-CJ40.

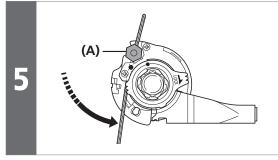

Front side of TL-CJ40

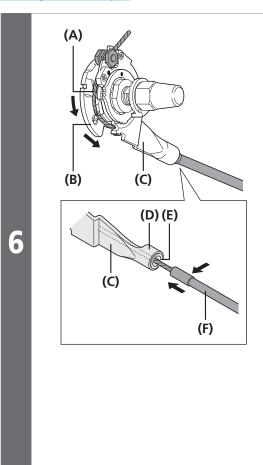

Bring the cable around to the cassette joint pulley, hold it so that the inner cable fixing nut is facing outwards (towards the dropout), and then slide the flats part of the inner cable fixing washer into the gap in the pulley.

- (A) Flats part of inner cable fixing washer
- **(B)** Gap in pulley
- **(C)** Inner cable fixing nut
- (D) Pulley

Turn the cable 60° counterclockwise and attach it to the hook.

(A) Hook

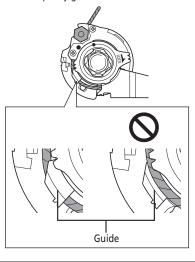

Attach the inner cable to the pulley as shown in the illustration, pass the inner cable through the slit in the bracket, and then insert the end of the outer casing securely into the outer casing holder.

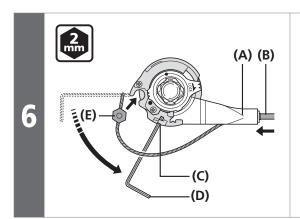

- (A) Inner cable
- (B) Pulley
- (C) Bracket
- (D) Outer casing holder
- (E) Slit
- (F) Outer casing

NOTICE

Check that the inner cable is correctly seated inside the pulley guide.

When inserting outer casing into outer casing holder first

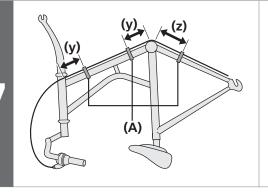

Insert the outer casing into the outer casing holder.

Insert a 2 mm hexagon wrench or a #14 spoke into the hole in the pulley, and then turn the pulley.

Fit the inner cable mounting bolt unit into the gap in the pulley.

- (A) Outer casing holder
- (B) Outer casing
- **(C)** Hole in pulley
- **(D)** 2 mm hexagon wrench or #14 spoke
- **(E)** Inner cable mounting bolt unit

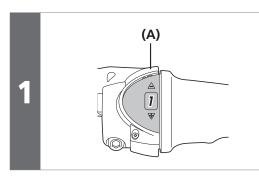

Secure the cable to the frame with the outer casing bands.

- **(y)** 10 cm
- **(z)** 15 cm

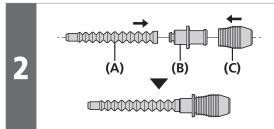

(A) Outer casing bands

CJ-NX40 / CJ-8S40

Set the REVOSHIFT lever to 1.

(A) REVOSHIFT lever

Install the rubber cover and rubber bellows to the outer casing holder.

- (A) Rubber bellows
- **(B)** Outer casing holder
- (C) Rubber cover

3

Wipe off any grease on the inner cable.

NOTICE

Use a new inner cable; do not use a cable which has had its end cut off.

4. (A) (B)

While holding the end of the rubber bellows, insert the inner cable.

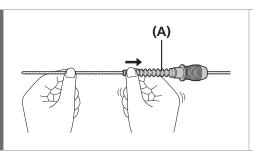

(A) End of rubber bellows

(B) Inner cable

NOTICE

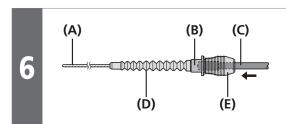

Be careful not to pierce the rubber bellows with the end of the inner cable at this time.

5

Slide the rubber bellows onto the inner cable.

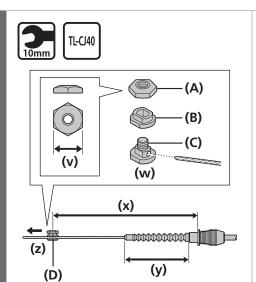

(A) Rubber bellows

Insert the outer casing into the rubber cover and set it into the outer casing holder.

Push the outer casing so that it securely touches the holder.

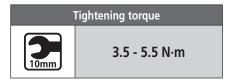

- (A) Inner cable
- **(B)** Outer casing holder
- **(C)** Outer casing
- **(D)** Rubber bellows
- (E) Rubber cover

After checking that the end of the outer casing is securely set in the cable adjustment barrel of the shift lever, attach the inner cable mounting bolt unit to the inner cable.

- (v) 10 mm
- (w) Pass the inner cable through the
- (x) 127 mm
- (y) 63 mm or less
- (z) Pull the inner cable when securing

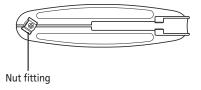

- (A) Inner cable mounting nut (Black)
- **(B)** Inner cable mounting washer (Silver)
- **(C)** Inner cable mounting bolt (Silver)
- (D) Inner cable mounting bolt unit

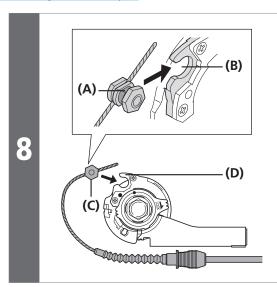

NOTICE

- This inner cable mounting bolt unit is designed only for CJ-NX10, CJ-NX40, CJ-8S20, and CJ-8S40. 11-speed mounting bolt units cannot be used.
- The tool is shipped ready to be used for CJ-NX10 and CJ-8S20.
- When installing the inner cable mounting bolt unit, use the setting tool TL-CJ40 (Y70898020).
- For CJ-NX40 and CJ-8S40, use the reverse side of TL-CJ40. Replace the nut fitting as shown in the illustration.

Reverse side of TL-CJ40

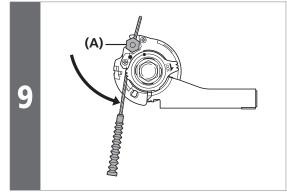

Installing to the cassette joint

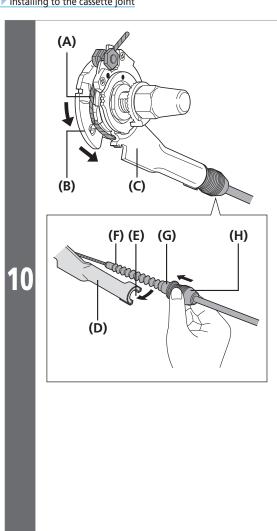

Bring the cable around to the cassette joint pulley, hold it so that the inner cable fixing nut is facing outwards (towards the dropout), and then slide the flats part of the inner cable fixing washer into the gap in the pulley.

- (A) Flats part of inner cable fixing washer
- **(B)** Gap in pulley
- (C) Inner cable fixing nut
- (D) Pulley

Turn the cable 60° counterclockwise and attach it to the hook.

(A) Hook

Mount the inner cable into the pulley as shown in the illustration.

Holding the rubber cover, insert the rubber bellows part of the inner cable into the slit in the cassette joint bracket.

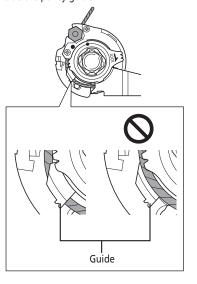

Next, insert the outer casing holder securely into the outer casing holder section of the cassette joint.

Be careful not to damage the rubber bellows at this time.

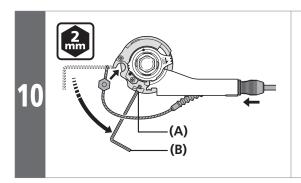

- (A) Inner cable
- (B) Pulley
- (C) Bracket
- **(D)** Outer casing holder section
- (E) Slit
- **(F)** Rubber bellows
- (G) Outer casing holder
- (H) Rubber cover

NOTICE

Check that the inner cable is correctly seated inside the pulley guide.

When inserting outer casing holder into outer casing holder section of cassette joint

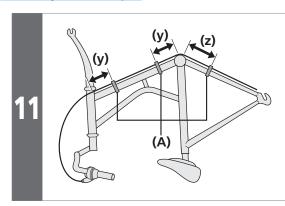

Insert the outer casing holder into the outer casing holder section of the cassette joint.

Insert a 2 mm hexagon wrench or a #14 spoke into the hole in the pulley, and then turn the pulley.

Fit the inner cable mounting bolt unit into the gap in the pulley.

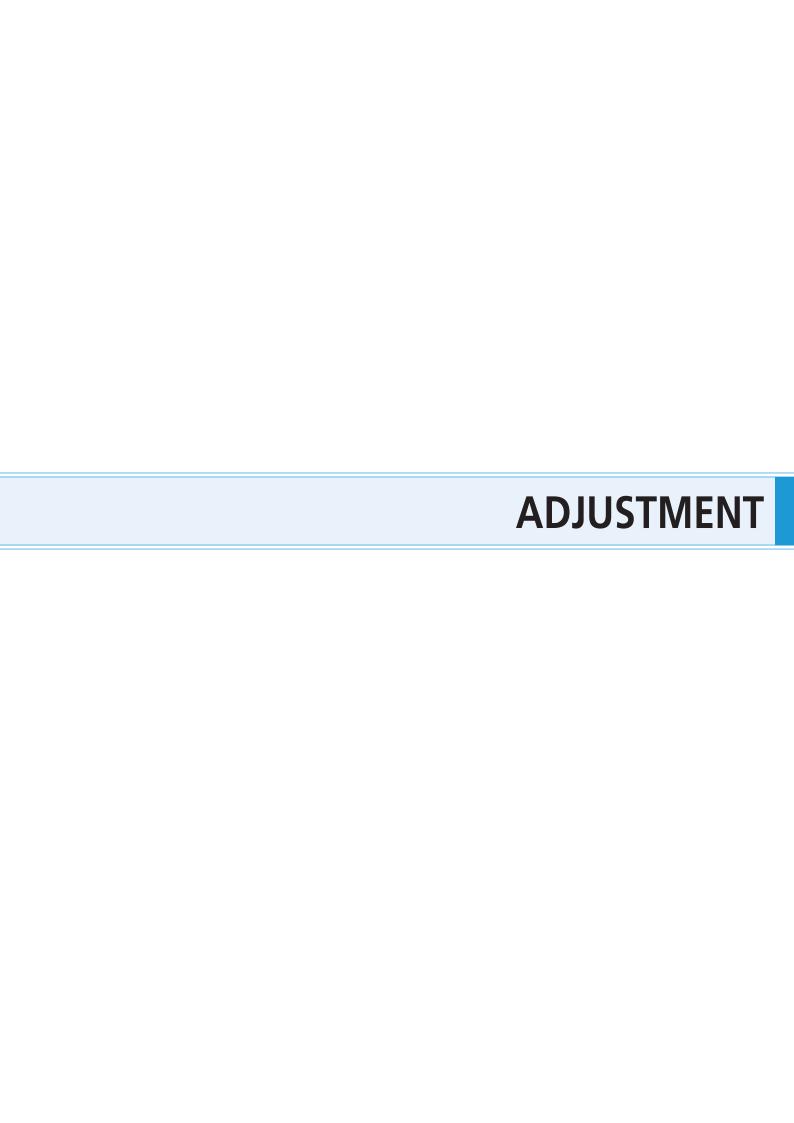

- **(A)** Hole in pulley
- (B) 2 mm hexagon wrench or #14 spoke

Finally, fix the cable on the frame with the outer casing bands.

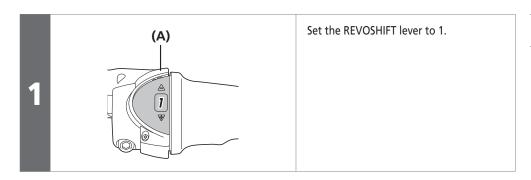

- **(y)** 10 cm
- **(z)** 15 cm

(A) Outer casing bands

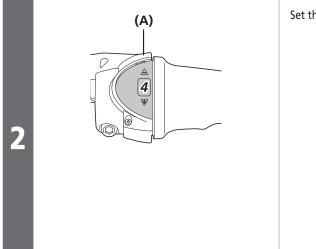

ADJUSTMENT

■ Adjusting the cassette joint

(A) REVOSHIFT lever

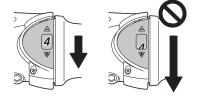

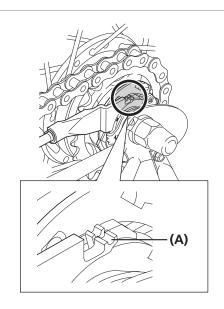

Set the REVOSHIFT lever to 4.

(A) REVOSHIFT lever

NOTICE

When setting, do so gradually and with minimal force so as to avoid over-shifting. If you over-shift, the setting line will not return to the proper position, and the setting lines may not be aligned at the correct position. (Refer to procedure 3)

Check that the yellow setting lines on the cassette joint bracket and pulley are aligned with each other. (A) Yellow setting lines

NOTICE

If the overlapping area falls short of two thirds of each setting line, the gears may not be properly engaged during pedaling, resulting in abnormal noise or free spinning of the pedals.

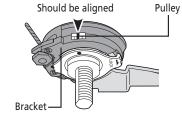

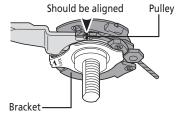

The yellow setting lines on the cassette joint are located in two places. Use the one that is easiest to see.

When the bicycle is upright

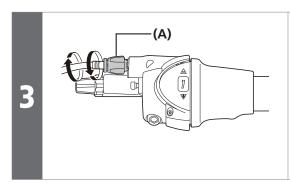

When the bicycle is upside down

2

If the yellow setting lines are not aligned

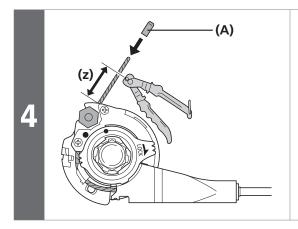

Turn the cable adjustment barrel of the REVOSHIFT lever to align the setting lines.

Again, move the REVOSHIFT lever from X to Y, then back to X, and confirm that the yellow setting lines are aligned.

	Х	Υ
8-speed	4	1

(A) Cable adjustment barrel

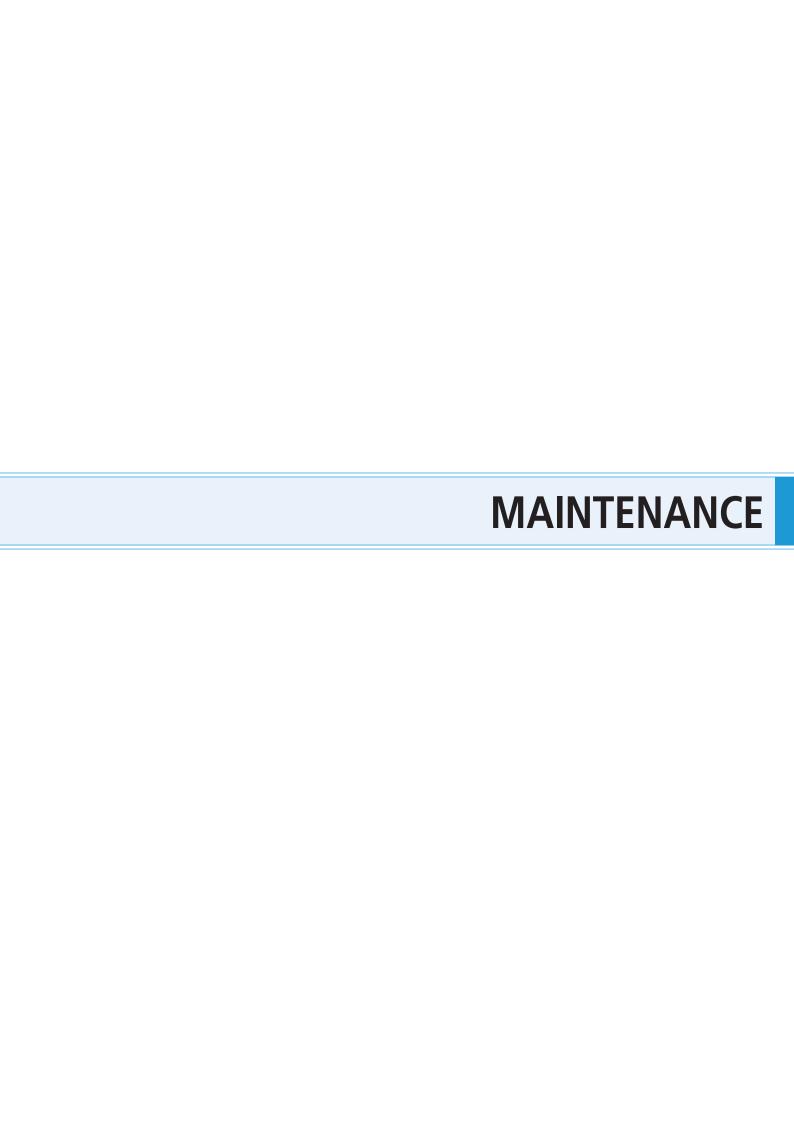

After adjusting the cassette joint, cut off the excess length of inner cable.

Next, install the inner end cap.

(z) 15 - 20 mm

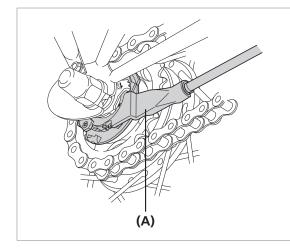

(A) Inner end cap

MAINTENANCE

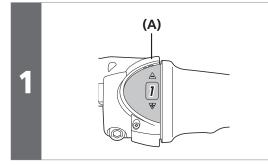

■ Disconnecting the shifting cable when removing the rear wheel from the frame

CJ-NX10 / CJ-8S20

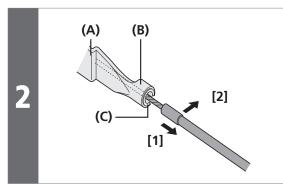

Disconnect the cable from the cassette joint when removing the rear wheel from the frame.

(A) Cassette joint

Set the REVOSHIFT lever to 1.

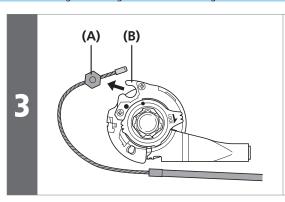

(A) REVOSHIFT lever

Pull out the outer casing from the outer casing holder of the cassette joint, and remove the inner cable from the slit in the bracket.

- (A) Bracket
- **(B)** Outer casing holder
- (C) Slit

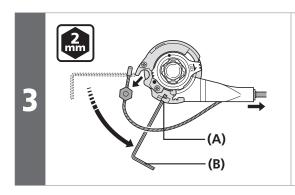

Disconnecting the shifting cable when removing the rear wheel from the frame

Remove the inner cable mounting bolt unit from the cassette joint pulley.

- (A) Inner cable mounting bolt unit
- **(B)** Cassette joint pulley

When it is difficult to remove the outer casing from the outer casing holder of the cassette joint

Insert a 2 mm hexagon wrench or a #14 spoke into the hole in the cassette joint pulley and turn the pulley to slacken the inner cable.

First, remove the inner cable mounting bolt unit from the pulley.

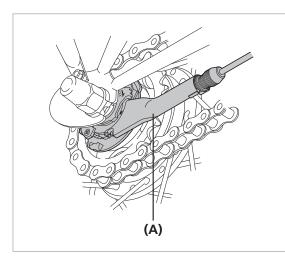

Pull the outer casing out from the outer casing holder.

- (A) Hole in pulley
- **(B)** 2 mm hexagon wrench or #14 spoke

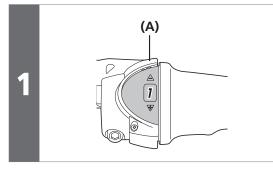

When remounting the cable, refer to the section "Installation of the shifting cable".

CJ-NX40 / CJ-8S40

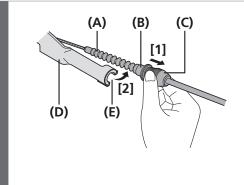

Disconnect the cable from the cassette joint when removing the rear wheel from the frame.

(A) Cassette joint

Set the REVOSHIFT lever to 1.

(A) REVOSHIFT lever

Hold the rubber cover and pull the outer casing holder out from the outer casing holder section of the cassette joint [1].

Remove the rubber bellows portion of the inner cable from the slit in the bracket [2].

Be careful not to damage the rubber bellows at this time.

(A) Rubber bellows

(B) Outer casing holder

(C) Rubber cover

(D) Outer casing holder section

(E) Slit

NOTICE

Do not remove the cable by pulling the outer casing.

3 (A) (B)

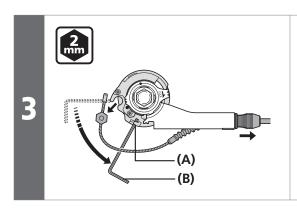

Remove the inner cable mounting bolt unit from the cassette joint pulley.

- (A) Inner cable mounting bolt unit
- **(B)** Cassette joint pulley

MAINTENANCE

Disconnecting the shifting cable when removing the rear wheel from the frame

When it is difficult to remove the outer casing holder from the outer casing holder section of the cassette joint

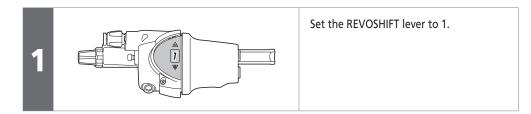

Insert a 2 mm hexagon wrench or a #14 spoke into the hole in the cassette joint pulley and turn the pulley to slacken the inner cable.

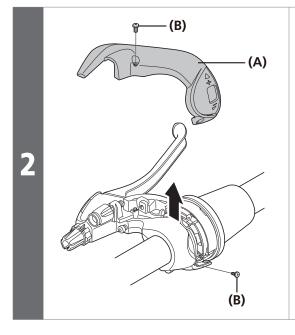

First, remove the inner cable mounting bolt unit from the pulley.

Pull the outer casing holder out from the outer casing holder section.

- **(A)** Hole in pulley
- **(B)** 2 mm hexagon wrench or #14 spoke

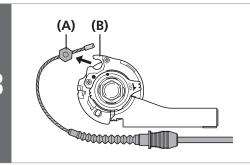

■ Replacing the inner cable

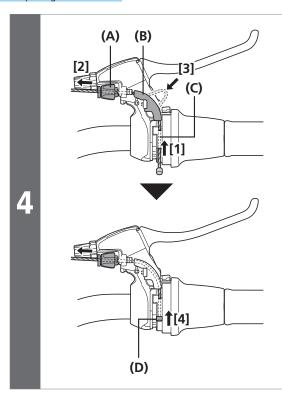

Loosen the cover fixing screws, and then remove the cover.

- (A) Cover
- **(B)** Cover fixing screw

Remove the inner cable mounting bolt unit from the cassette joint pulley.

- (A) Inner cable mounting bolt unit
- **(B)** Cassette joint pulley

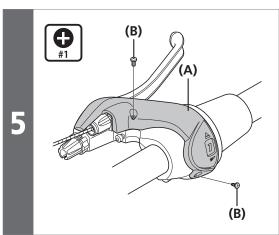

Pass the inner cable from the hole in the winder unit through the hole in the cable adjustment barrel.

Next, insert the inner cable into the groove of the cable guide.

Next, pull the inner cable so that the inner cable drum fits into the recess in the winder unit.

- (A) Hole in cable adjustment barrel
- **(B)** Groove of cable guide
- **(C)** Hole in winder unit
- (D) Recess in winder unit

Replace the cover and tighten the cover fixing screws.

- (A) Cover
- **(B)** Cover fixing screw

Tightening torque

0.1 - 0.2 N·m

Oil maintenance of the internal assembly

To maintain the product in good working order, it is recommended to have the place of purchase or a distributor carry out maintenance such as lubrication of the internal parts about once a year from the first time of use (once every 2,000 km if the bicycle is used very frequently). If the bicycle is used under harsh conditions, more frequent maintenance is required. Also, for carrying out maintenance, the use of SHIMANO internal geared hub grease or a lubrication kit is recommended. If SHIMANO grease or a SHIMANO lubrication kit is not used, problems such as a malfunction in gear shifting may occur.

(A) WB maintenance oil set (Y00298010)

(z)

Fill the container with maintenance oil to a height of 95 mm.

(z) 95 mm

Immerse the internal unit in the oil from the left side until the oil reaches up to ring gear unit 1, as shown in the illustration.

(z) Ring gear unit 1

Keep the internal unit immersed for approximately 90 seconds.

4

Remove the internal unit from the oil.

5

Let excess oil drain off for approximately 60 seconds.

6

Reassemble the hub.
